Abstract (Basic): EP 160390

Embryogenic callus and embryogenic cell suspns. of corn inbred B73 and their clones are new.

Corn plants and their seed regenerated from embryogenic callus and embryogenic cell suspn. of corn inbred B73 and their clones are new.

The corresp. mutagenised callus and cells suspns., and plants and seeds are new.

Progeny of corn plants regenerated from embryogenic callus and embryogenic cells suspns. of corn inbred B73 and their clones. the progeny including mutants and variant progeny, are new.

USE/ADVANTAGE - Whole plants can be regenerated from the embryogenic tissue and cell suspn. cultures of corn inbred B73 so that in vitro selections for desirable traits or against undesirable traits can be made. The cultures may be exposed to herbicides or pathotoxins for selection of resistant tissues and cells, and for regeneration of resistant plants. In this way improved corn crops can be obtd. @(26pp Dwg.No.0/4)@
